DATA ANALYST

Wake Forest MSBA candidate skilled in Python, SQL, Excel, and statistical modeling. Built a fraud detection model in Python that reached an AUC of 0.881 on data it had never seen. In co-op roles at Shaw Industries, built data tools from scratch, including a Power Apps tracking app and Excel reporting systems, and used the data to measure a 35% productivity gain and support a 5.7% improvement in output per labor hour.

EDUCATION

Wake Forest University School of Business, Winston-Salem, NC
Master of Science in Business Analytics *May 2027*
Relevant Coursework: Python Programming for Business Analytics, Machine Learning for Business Analytics, Data Management for Business Analytics, Statistical Thinking for Business Decision-Making

Georgia Highlands College, Cartersville, GA
Bachelor of Business Administration, Logistics & Supply Chain Management *May 2026*

AREAS OF EXPERTISE

Data Visualization | KPI Development | Statistical Analysis | Database Management | Performance Reporting | Process Improvement | Predictive Modeling | Root Cause Analysis | Trend Analysis | Quantitative Analysis | Data-Driven Decision Making | Machine Learning | Data Storytelling | Cross-Functional Collaboration

TECHNICAL SKILLS

Programming & Querying: Python (pandas, NumPy, SciPy, matplotlib, scikit-learn, statsmodels), SQL
Statistics: Descriptive Statistics, Hypothesis Testing, Confidence Intervals, Linear & Logistic Regression, Feature Selection
Data Analysis & Visualization: Excel (Pivot Tables, XLOOKUP), Tableau, Power BI, Jupyter Notebook, Google Colab

PROFESSIONAL EXPERIENCE

GRADUATE CONSULTANT | **Texas Rattlers, PBR Teams (MSBA Practicum)** | Winston-Salem, NC *October 2026 – Present*
- Building a database of 62,780 rides for all 212 PBR Teams riders, checked 100% against PBR's official totals, and a model that predicts which riders are most likely to post 90-point rides to help the team recruit

GRADUATE RESEARCH ASSISTANT | **Wake Forest University School of Business** | Winston-Salem, NC *October 2026 – Present*
- Developing StockSmart, an AI chat web app for a faculty research study that turns several custom ChatGPT assistants into one app. It runs participants through 4 study conditions, connects to Qualtrics, and saves chat transcripts for analysis

PROCESS IMPROVEMENT CO-OP | **Shaw Industries** | Dalton, GA *January 2026 – July 2026*
- Built an Excel KPI dashboard using XLOOKUP and pivot tables to track daily and weekly productivity for 9 operators across 3 shifts, enabling supervisors to monitor performance and make data-driven staffing decisions
- Developed a weekly performance reporting tool used by supervisors to communicate individual productivity metrics and identify improvement opportunities
- Designed and maintained an Excel database tracking incentive qualification metrics, monthly reward costs, and performance outcomes for 90 employees in a newly implemented productivity program
- Analyzed operational performance data to evaluate incentive program effectiveness, contributing to a 5.7% increase in average CPMH within 4 months

LOGISTICS CO-OP | **Shaw Industries** | Calhoun, GA *June 2025 – December 2025*
- Engineered a Power Apps application connected to SharePoint to capture time-stamped associate activity in real time, replacing manual logs and improving data accuracy for daily operational reporting
- Conducted a time-motion study of 16 utility associates across unloading, restocking, and outbound loading, using task-level timing data to identify bottlenecks and streamline workflows
- Designed a pre/post time study comparing receiving throughput (pallets per hour) against benchmarks after a process change, quantifying a 35% increase in workforce productivity

ANALYTICAL PROJECT EXPERIENCE

Fraud Detection Model (Python, Team of 5): Built a logistic regression model to flag likely fraud when a bank account application is submitted, using 247,111 applications from a 43-table bank database. Combined my teammates' feature ideas into 55 candidate features and narrowed them to 20 with statistical tests and stepwise selection. On a month of data the model never saw, it reached an AUC of 0.881 vs. 0.606 for the bank's current fraud score. The recommended cut-off catches 64% of fraud while reviewing 11.5% of applications, cutting that month's estimated fraud costs by 46%.

LEADERSHIP & INVOLVEMENT

- **MSBA Student Engagement Council**, Member – Plan events and activities for MSBA students *2026 – Present*
- **MSBA Ambassador** – Connect with prospective students and share my experience in the program *2026 – Present*

HONORS & CERTIFICATIONS

- Foundations of Data Science, Google *June 2026*
- Finance & Quantitative Modeling Certificate, Wharton School, University of Pennsylvania *January 2026*
